EE23BTECH11052 - Abhilash Rapolu

Question 49: The period of the discrete-time signal x[n] described by the equation below is N = (Round off to the nearest integer).

$$x[n] = 1 + 3\sin\left(\frac{15\pi}{8}n + \frac{3\pi}{4}\right) - 5\sin\left(\frac{\pi}{3}n - \frac{\pi}{4}\right)$$

Solution:

Parameter	Description	Value
f_1	Sinusoid1 Frequency	15/16
f_2	Sinusoid2 Frequency	6
TABLE I		

GIVEN PARAMETERS LIST

The time period must be an integer for a discretetime signal.

$$T_1 = \frac{1}{f_1} = \frac{16}{15} \tag{1}$$

$$T_2 = \frac{1}{f_2} = 6 \tag{2}$$

$$N = LCM(T_1, T_2) = 48$$
 (3)

The Time Period of the signal is N=48.

Let's find the Z-transform of x[n] by using the linearity property:

$$X(z) = Z(1) + Z\left(3\sin\left(\frac{15\pi}{8}n + \frac{3\pi}{4}\right)\right)$$
 (4)

$$-Z\left(5\sin\left(\frac{\pi}{3}n - \frac{\pi}{4}\right)\right) \tag{5}$$

$$X(z) = \sum_{n = -\infty}^{\infty} 1 \cdot z^{-n} \tag{6}$$

$$+\sum_{n=-\infty}^{\infty} \left(3\sin\left(\frac{15\pi}{8}n + \frac{3\pi}{4}\right) \cdot z^{-n}\right)$$
 (7)

$$+\sum_{n=-\infty}^{\infty} \left(5\sin\left(\frac{\pi}{3}n - \frac{\pi}{4}\right) \cdot z^{-n}\right)$$
 (8)

$$X(z) = \frac{1}{1 - z^{-1}} + \frac{3\sin(\frac{3\pi}{4})z}{z^2 - 2z\cos(\frac{15\pi}{8}) + 1}$$
 (9)

$$-\frac{5\sin\left(-\frac{\pi}{4}\right)z}{z^2 - 2z\cos\left(\frac{\pi}{3}\right) + 1}\tag{10}$$

$$X(z) = \frac{1}{1 - 3\cos\left(\frac{15\pi}{8}\right)z^{-1} + z^{-2}}$$
 (11)
